

MYOB®

what's new

MYOB Accounting

What's new in MYOB Accounting v17?

The 2007 release of MYOB Accounting has been developed specifically to enhance the existing features and introduce new features that will make accounting even more rewarding for small business.

Learn about the new features and improvements we've made since the release of MYOB Accounting v15.

Manage your inventory

MYOB Accounting automatically adjusts your inventory as you buy and sell items, so you always know what's in stock. The Receive Inventory function provides a clear and easy way to receive items into inventory when they arrive.

- Use the new Standard Cost field as the basis of item values on Purchases/orders in place of Last Cost
- Sell items that have not been received yet by letting your inventory go negative
- Track short shipments, partial shipments, back orders and what's left on order from the original Purchase Order

Undo your last bank account reconciliation

If you have cleared and reconciled the wrong transaction or deleted a previously reconciled transaction, you can easily undo your last bank reconciliation. When you undo a reconciliation, all transactions for that period return to an 'un-reconciled' status; the transaction will again appear in the Reconcile Accounts window.

Generate current and future budgets

Project and plan for the future success of your business. MYOB Accounting v17 quickens and simplifies the budgeting process by enabling you to plan next year's budget while you're still in the current year. You can now work on all your balance sheet accounts and profit & loss accounts in one easy window in a simple spreadsheet format.

With the new shortcuts you can copy budget actuals from last year or actuals from one month into all months to compare budget to actuals.

By simply entering an ending figure, MYOB Accounting v17 can calculate and enter the monthly amounts. And budgets can be imported and exported in one simple step.

- Prepare budgets for future years with Next year budgeting
- Compare budget to actuals with Comparative Budget Reports
- Enter budgets quickly and easily using the New Budgets Window rather than drilling down on an account and clicking budgets one at a time
- Create the numbers with easy-to-use short cuts

Automatically create a purchase order from a sale

Reduce time spent entering information in your business accounts with a click of a button. The new 'Create PO' button allows you to easily transfer line items entered on a sales quote or a sales order to a purchase order.

Streamline your accounts

Clean up accounts and contact cards with ease, make duplicates and old accounts or cards a thing of the past. With MYOB Accounting v17, you can merge accounts and client histories, and keep transactions and amounts in tact and stored in the one single account.

This tool gives you the freedom to work with a tidy and functional accounts and cards list.

Send a remittance advice by mail or email

Allows you to print or email a payment notification to inform a supplier that you have made a payment toward one or more of your outstanding balances with them. Particularly useful when you pay a bill electronically.

Synchronise your MYOB contacts with Microsoft Outlook

With the Sync Cards feature, you can use either your MYOB Cards List, Microsoft Outlook or Apple AddressBook as your main business contact directory. One simple process keeps your contact lists up to date with your MYOB Cards List. In Windows you can even choose which card types to transfer so that personal or employee card details are kept where you want them.

More Enhancements

NEW – Recurring Enhancements

Create a recurring transaction/bill by selecting multiple cards when using the Copy feature to save you time which can be better spent on growing your business.

NEW - Access up to seven years of transaction history

Keep track of all of your transaction details (from the previous financial year) when rolling over to the new financial year, and access the information at any time.

Simply save previous year transactions into your current year file when starting a New Financial Year. The software can hold up to seven years of transaction history in one company file, removing the painstaking task of reverting to a back-up to pull up an old invoice.
